ARAGON TERRITORY

Territorial Energy Strategy

The project aims to promote energy transition through the use of local and renewable energy resources and to advise from auditors and experts to local citizens in order to propose better energy solutions. The Local Action Group Bajo Aragon-Matarrana has implemented the project and 7 other LAG joined. Together, they settled it up with specific actions (information, conferences, advices....) and created a unfo energy point and specific digital management tools.

Main challenges

- Having a partnership of 8 Local Action Groups
- Involving the whole population in a defined territory
- Setting up an appropriate communication (seminars, conferences, personal advices ...)
- Crossing energy solutions with local resources
- Setting up an effective dynamic to respect the planning and the deadlines
- Detecting the needs of the territory and proposing improvements by integrating new technologies (digital, environmental, social...) regarding the quality of life
- Thinking up the project and setting up a financial model before acting

Innovation in rural area

This project is innovative in the rural territorial context in which it is framed. To unify energy supply and demand by exploiting resources, it is necessary to adapt the facilities to new technologies, automation, programming, communications and the Internet in our environment. The objective is to create a more efficient environment with great comfort.
